LAB REPORT on

Object Oriented Java Programming (23CS3PCOOJ)

Submitted by

Aparna Sankar(**1BM23CS047**)

in partial fulfillment for the award of the degree of
BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019

Sep-2024 to Jan-2025

B.M.S. College of Engineering,
Bull Temple Road, Bangalore 560019
(Affiliated To Visvesvaraya Technological University, Belgaum)
Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled “Object Oriented Java Programming (23CS3PCOOJ)” carried out by **Aparna Sankar (1BM23CS047)**, who is bonafide student of **B.M.S. College of Engineering**. It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum. The Lab report has been approved as it satisfies the academic requirements in respect of an Object Oriented Java Programming (23CS3PCOOJ) work prescribed for the said degree.

Program 1

Implement Quadratic Equation

Algorithm:

LAB-1 Program

- Q) Program to develop a java program that prints all real solutions to the quadratic equation $a \cdot x^2 + b \cdot x + c = 0$
Read in a, b, c and use all quadratic Formula

```
→ import java.util.Scanner;  
import java.lang.Math;
```

```
class quadratic
```

```
{
```

```
    int a, b, c;
```

```
    double b;
```

```
    double r1, r2;
```

```
void run()
```

```
{
```

```
    Scanner S = new Scanner(System.in);
```

```
    System.out.println("Enter value for a: ");
```

```
    a = S.nextInt();
```

```
    System.out.println("Enter value for c: ");
```

```
    c = S.nextInt();
```

```
    if (a == 0)
```

```
        System.out.println("Not a quadratic equation");
```

```
    }
```

```
System.out.println("Enter value for b: ");
```

```
b = S.nextInt();
```

else {

$d = b * b - 4 * a * c$;

if (d == 0) {

$r1 = (-b) / (2 * a)$;

System.out.println("Roots are real and equal")
Root : " + r1 + "\n");

}

else if (d > 0) {

$r1 = ((-b) + \text{Math.sqrt}(d)) / (2 * a)$;

$r2 = ((-b) - \text{Math.sqrt}(d)) / (2 * a)$;

System.out.println("Roots are real and distinct")

Roots: r1 = " + r1 + "\t r2 = "
+ r2 + "\n");

}

else {

$r1 = (-b) / (2 * a)$;

$r2 = \text{Math.sqrt}(-d) / (2 * a)$;

System.out.println("Roots are imaginary")

Roots: " + r1 + "j + " + r2 + "\n");

}

}

}

}

class week 1 {

```

public static void main(String[] args) {
    quadratic q = new quadratic();
    q.run();
}
}

```

Output:

Enter value For a:

1

Enter value For b:

6

Enter value For c:

5

Real and Distinct Roots

$r_1 = -5.0$

$r_2 = -1.0$

code:

```
import java.util.Scanner;
```

```
import java.lang.Math;
```

```

class Quadratic
{
    int a,c,b;
    double d;
    double r1,r2;

    void run ()
    {
        System.out.println("Aparna Sankar 1BM23CS047");
        Scanner S=new Scanner(System.in);
        System.out.println("Enter value for a: ");
        a=S.nextInt();
        System.out.println("Enter value for b: ");
        b=S.nextInt();
        System.out.println("Enter value for c: ");

Program 3
book class

Algorithm:

LAB-3

- Q) Create a class Book which contains four members: name, author, price, num, pages. Include a constructor to set the values for the members. Include methods to set and get the details of the objects. Include a toString() method that could display the complete details of the book. Develop a Java program to create n book objects

Program Book(String name, String author, int price, int npage)

{

this.name = name;

this.author = author;

this.price = price;

this.npage = npage;

}

public String toString()

{

String name, author, price, npage;

name = "Book name:" + this.name + "\n";

author = "Author name:" + this.author + "\n";

price = "Price:" + this.price + "\n";

```
npage = "Number of pages : " + this.npage + "\n";
```

```
return name + author + price + npage;
```

```
}
```

```
}
```

```
class bookrun {
```

```
public static void main(String args[]) {
```

```
Scanner s = new Scanner(System.in);
```

```
String name, author;
```

```
int price, npage;
```

```
int n;
```

```
System.out.println("Enter the number of books");
```

```
n = s.nextInt();
```

```
Book b[] = new Book[n];
```

```
for (int i = 0; i < n; i++) {
```

```
System.out.println("Enter book name");
```

```
name = s.next();
```

```
System.out.println("Enter book Author");
```

```
author = s.next();
```

```
System.out.println("Enter book Price");
```

```
price = s.nextInt();
```

```
System.out.println("Enter the number of Pages in the book");
```

```

20
40
Area of the Triangle is:
Area is :400.0
Enter the dimensions of the Circle:
30
Area of the circle is:
Area is :94.2
```

Program 5

bank account

Algorithm:

LAB-5

Q2) ~~import java.util.Scanner;~~ Develop a Java program to create a class Bank that maintains two kinds of account for its customers, one called savings account and the other ~~account~~ current account. The savings account provides compound interest and with drawal facilities but no cheque book facility. The current account provides cheque book facility but no interest. Current account holders should also maintain a minimum balance and if the balance falls below this level, a service charge is imposed.

- Create a class Account that stores customer Name, account number and type of account. From this derive the classes Cur-acct and Sav-acct to make them more specific to their requirements. Include the necessary methods in order to achieve the following tasks:
 - a) Accept Deposits from customer and update the balance.
 - b) Display the balance.
 - c) Compute and deposit interest.
 - d) Permit withdrawal and update the balance.
 - e) Check for the minimum balance, impose penalty if necessary and update the balance.

```
1) import java.util.Scanner
```

```
class Account {
```

```
    protected String customerName;  
    protected int accountNumber;  
    protected double balance;
```

```
    public Account(String customerName, int  
        accountNumber, double balance) {
```

```
        this.customerName = customerName;  
        this.accountNumber = accountNumber;  
        this.balance = balance;
```

```
    }
```

```
    public void displayBalance() {
```

```
    public void deposit(double amount) {
```

```
        if (amount > 0) {
```

```
            balance += amount;
```

```
            System.out.println("Deposited: " + amount);
```

```
        } else {
```

```
            System.out.println("Invalid deposit amount.");
```

```
        }
```

```
    }
```

```
    public void displayBalance() {
```

```
System.out.println("Balance:" + Balance);
```

```
}
```

```
}  
  
class SavAccb extends Account {  
    private double interestRate;
```

```
    public SavAccb(String customerName, int accountNumber,  
                    double balance, double interestRate) {
```

```
        super(customerName, accountNumber, balance, interestRate);
```

```
        super(customerName, accountNumber, balance,  
              this.interestRate = interestRate;
```

```
}
```

```
    public void computeAndDepositInterest() {
```

```
        double interest = balance * (interestRate / 100);
```

```
        balance += interest;
```

```
        System.out.println("Interest added:" + interest);
```

```
}
```

```
    public void withdraw(double amount) {
```

```
        if (amount <= balance) {
```

```
            balance -= amount;
```

```
            System.out.println("Withdrawn:" + amount);
```

```

        if (balance < minimumBalance) {
            balance -= serviceCharge;
            System.out.println("Service charge imposed."
                               + serviceCharge);
        }
    } else {
        System.out.println("Insufficient balance for
                           withdrawal");
    }
}
}
}

```

Output:

A screenshot of a terminal window with a black background and white text. The text shows the execution of a Java program. It starts with a directory path 'D:\Java' followed by the command 'java FatherSon'. The program then prints the name 'Aparna Sankar' and ID '1BM23CS047'. It prompts for 'Enter Father's Age:' and receives '45'. It prompts for 'Enter Son's Age:' and receives '12'. Finally, it displays 'Father's Age: 45' and 'Son's Age: 12'.

```
D:\Java>java FatherSon  
Aparna Sankar 1BM23CS047  
Enter Father's Age: 45  
Enter Son's Age: 12  
Father's Age: 45  
Son's Age: 12
```
